Coffea Ducea, *Coffea Testidae*, *Coffea Sinarum*, *Coffea Hippuricae*, *Coffea Arabica*, *Coffea Magistralis* and *Coffea Plantaginae* are in another faction. *Coffea Americana* are also in another faction. Effect of obesity on the outcome of non-union of fractures in children: a systematic review and meta-analysis. The effect of obesity on the outcome of fracture healing in children is unclear. Therefore, we performed a meta-analysis to evaluate the effect of obesity on the outcome of non-union of fractures in children. A systematic review was conducted of electronic databases including PubMed, EMBASE, Web of Science, the Cochrane Library, and ClinicalTrials.gov. A meta-analysis was performed using fixed-effect models to pool the data. Risk ratios (RR) with 95% confidence intervals (95% CI) were calculated for the included studies. Ten studies were eligible for inclusion in the present meta-analysis, including 2372 children. Compared with non-obese children, obese children showed significantly lower functional outcome scores at the end of treatment (RR, 0.84; 95% CI, 0.74-0.95; P = 0.006) and at the last follow-up (RR, 0.92; 95% CI, 0.86-0.97; P = 0.003) and longer time to union (MD, 3.68; 95% CI, 1.95-5.41; P = 0.000). The pooled RRs of remaining pain, remaining range of motion, time to union, and the complication rate were 2.00 (95% CI, 1.60-2.48; P = 0.000), 1.54 (95% CI, 1.33-1.77; P = 0.000), 1.05 (95% CI, 0.80-1.37; P = 0.728), and 1.08 (95% CI, 0.87-1.33; P = 0.509), respectively. Obesity in children has an adverse impact on the functional outcome and rate of union of non-union of fractures, but has no significant effect on the remaining pain, remaining range of motion, and complication rate, with I² is 2.1 %, and that for with I² plus hot-stamp is 3.5 %. 82157476af
